COI, on behalf of Department of Health, invites recipients of this brief to tender for the

The contract is for the period Jan 2009 until 31 March 2010. The contract is subject to COI's standard terms and conditions.

Competing agencies are expected to respect the confidential and sensitive information

agencies or their affiliates have 200 any potential conflicts of interest, specifically if

1. Background

arroncy backyround

### MMR vaccine

The MMR vaccine protects against Measles, Mumps and Rubella (German measles). The first dose is given to a child soon after their first birthday and the second dose is given at three years and four months (see Annex 1 for complete childhood immunisation schedule).

# MMR vaccine uptake

We are seeing increasing numbers of confirmed measles and outbreaks occurring around the country and there is now a real risk of an epidemic. In 2007 there were 990 cases reported (the highest since surveillance started in 1995) and up to end October 2008 there were already 1,050-2005 to see the surveillance started.

dose of MMR.

The risk of an outbreak is greatest in London, mainly due to lower immunisation coverage, but many parts of the country (see Annex 2, Chart 3 for 2007/08 breakdown).

Prior to measles vaccine being introduced in 1965 there were about 100 deaths per year. Since the introduction of the measles vaccine, cases and deaths from measles may regrice gramatically (see

The target uptake rate needed for herd immunity is 95%—this will help charter the entire population is protected from the disease. Since 1998, there has been a decline in the numbers of people having the MMR vaccine. 92% of babies aged 24 months had their first dose MMR in 1992 which since fell to 79%, but currently stands at 63% (See Annex 1, Chart 5). First dose coverage for children aged 5 has also fallen from

94% to the current level of 87.7% Current figures show that only 75.20% as a vega courage rates wary across the courage landar DOTE follows and Annex 1, Chart 5 & see PCT uptake figures).

A CMO letter and supporting guidance was issued to PET's in August 2008 on what actions should be taken to improve MMR uptake in their area. An information leaflet (MEASLES, Don't let your child catch it), Q&A and surgery poster have been produced and are currently being used by PCT's to communicate with parents in their local area (see Annex).

There may well already be communications campaigns in operation across England at local PCT level. London PCTs have joined together and additional funding besides a second form.

Media inferest is increasing but journalists are divise were little on the interest and the second of the interest and inter

## b. Research findings

## Parents tracking research 2007

Despite a decline in publicity, MMR remains the top of mind immunisation, although over the last few years this is continuing to decrease. Spontaneous awareness now stands at 75% (the highest spontaneous awareness now stands at 75% (the highest spontaneous stands at 75%). After prompting, awareness of the MMR vaccine remains stable and almost universal at 96% (the highest prompted awareness figure for other vaccines stands at 75%).

MMR is still seen as the least safe immunisation - 73% think it completely safe or just a slight risk, and

Ine diseases it protects against are seen as amongst the location when seem in second preventable diseases (42% of those interviewed considered pipells by according to most likely to be refused as delay at the second preventable with the profused as delay at the second pipells of the s

Univ. 1% or parents had delayed indefinitely or refused an immunisation. The health of the child can also be a reason for delaying indefinitely or refusing, although parents in this situation also have a broader range of concerns, such as safety, autism and family medical history. For future refusals, trust is an issue, as well as concerns about side effects and autism. In total, 12% of parents had either refused or delayed indefinitely of would refuse some immunisation.

The long-term trend of an increasing number of narents automatically having their children in the children in

parents who weigh up the pros and cons of at least one immunisation before deciding whether to immunist increasing proportions mentioning other vaccines. It may be that as this group shrinks in size, it leaves parents remain more likely to weigh up the pros and cons of immunisation vary, but there have been significant increases in the number of parents mentioning risk of side effects / safety of immunisations and in those considering the benefits of immunisations (see Annex 2, Chart 8).

Overall levels of trust in the information provided by health professionals and the NHS are high, and have

#### ? Commercation is a Church

A BIGO Drorile advertising Company which we have a controlled a media debate and giving further voice to those opposed to MMR. From research and past experience we know that he after the for reassuring parents is to keep MMR out of the headlines.

Our strategy is to use the following channels:

## PR campaign

A strong features-led approach is anticipated. The PR mix may include the recruitment of madia doctors to publicly support MMR and warn of the potential dangers of measles. Parenting and other influential titles would be briefed and encouraged to support title feature.

### Media partnership

With suitable media publishers using a combination of women's titles and possibly a national newspaper title, which would help to build so to this company to the restriction of the suitable and possibly a national newspaper title.

opportunity to achieve a powerful presence and the endorsement of the publisher

#### • Offine

Websites are often the forum for heated debate on immunisation and in particular MMP = callet take our messages to the debate. Working with i-level to book appropriate media space, a combination of paid search and advertorials on sites such as AOL and netmums would be used.

### Radio marketing (COI)

A piece on MMR may be put together and marketed to commercial and BBC radio stations.

There will be no communications planning agency invloved on this campaign. The work will be co-ordinated through COI.

#### ? Ahiactivae

Our abjective is to increase the

- Measles is serious and highly infectious if your child hasn't had his/her first and/or second doses of MMR it is important to have it – please contact your local surgery
- If you're not sure how many doses your child has had please check with your local surgery

#### بالولادة و ...

### Primary messages

- The numbers of measles cases in England are rising and outbreaks are occurring.
- Measles is serious. It can lead to pneumonia and encephalitis (inflammation of the brain) and it can kill.
- Measles is very infectious.
- The most effective way to protect children against measure to be a second of the control of

## Supporting messages

- The risk of measles is greatest in children who have received no MMR vaccine.
- The safest way to prevent measles is to be fully vaccinated with MMR vaccine.
- Your child should have two doses of the MMR vaccine, the first at 13 months and again at three
  years and four months.

## 8. Budget

Robuscon £300,000 and £400,000 (serinciade media partnefships and cornees)

### 9. Timings

The activity should start in February 2009 and run until 31 March 2010.

These timings are still subject to confirmation.

The PR contract will run from February 2009 to 31st March 2010.

#### 10. Evaluation

The PR activity will be evaluated by an independent media coverage evaluation agency

measures, such as number of mentions of key messages, tope of article, reach among torgot auditors.

whether supportive quote/spokesperson endorsement is included etc. Please consider alternative evaluation measures for all elements of your proposals. The agency will be expected to collect press cuttings and broadcast tapes for evaluation purposes.

PCT vaccine untake figures are recorded on amonthly havis and there will faccampaign.

### 11. Other Considerations

Please confirm that all information will be treated as confidential and that you will not disclose any commercially sensitive information to any third party. Please notify COL
